IMR INTRODUCES A SECOND *SUPER SHORT CUT* POWDER

Shawnee Mission Kansas, IMR-Legendary Powders, the innovator of *super short cut* technology introduces **IMR 4007 SSC**. You may want to get out your chronograph and see the difference this powder makes as it falls between IMR 4350 and 4064. "SSC" or *Super Short Cut* powder translates into charge weight consistency ergo accuracy. This important feature of **4007 SSC** means the powder easily and accurately flows through the powder measure. It's shortened grain drops smoothly into small case necks making it perfect for classic varmint cartridges like the 22-250, 220 Swift and 243 Winchester. Users of popular big game cartridges such as the 30-06, 300 Winchester Short Magnum and 7mm Winchester Short Magnum can attain top velocities typical of extruded powders, with the precision metering inherent in this new product. Additionally, the short powder grains permit ideal load density, making top velocities achievable where bulkier long grained propellant falls short.

Here are three "classic" cartridges with **IMR 4007 SSC** that produce *outstanding velocities*:

- 22-250 Remington 55 grain bullet, 39 grains **IMR 4007 SSC**=3,786fps
- 220 Swift 50 grain bullet, 43 grains **IMR 4007 SSC**=3,922fps
- 30/06 150 grain bullet, 55.3 grains **IMR 4007 SSC**=2,972fps

Look for **IMR 4007 SSC** in one pound bottles and eight pound kegs at favorite IMR dealers everywhere Spring 2007. For complete data see attached data sheet or go to imrpowder.com, call 913-362-9455 or write to IMR Powder Co., 6231 Robinson, Shawnee Mission, KS 66202. IMR-Legendary Powders
